## Fact file

### Auction House SW London Decra **Altus** virtual full height cubicles

**Altus** is a new, cost-effective, virtual full height cubicle system from Decra with extruded aluminium floor interfaces that eliminate the need for pedestal feet.

The new system provides the staff toilets for a famous auction house in London. Subtle brushed-aluminium effect laminate faces all panel components and nicely compliments the durable, DDA compliant satin anodised locks and furniture.

Although these panels are 19mm thick overall, **Altus** can also be specified with 12mm solid grade laminate panels to provide the increased performance typically required for projects such as schools and academies - as well as offering better privacy levels by dint of its virtual full height configuration.

Decra are both PEFC and FSC certified and can provide a fully PEFC compliant specification for the **Altus** system to meet any BREEAM considerations.

Altus forms part of the Decra full height and virtual full height ranges which include Burj true full and Chicane virtual full height systems with flush fascia's and Symetria 2350 near full height cubicles with slender aluminium pilasters.

Contact Decra for Altus colour options and details of our other products.
