

Fact file

82 Dean Street Decra **Burj** cubicles

Project architect Bar Gazetas specified the Decra **Burj** true full height cubicle system for this 5 floor office refurbishment in the heart of London's Soho district.

38mm lightweight core doors and pilasters have been faced with gloss texture high pressure laminate in plain grey with the addition of polished and lacquered ash hardwood edges to provide the flush frontage. 19mm white high pressure laminate faced particleboard has been used for the partition panels with the glossy grey look carried through to the rear duct panels.

Extruded aluminium interfaces have been used at the floor and ceiling to give a "floating appearance" from the front elevation and the quality DDA compliant stainless steel locks and hardware maintains a consistent quality throughout the installation.

Elegant white Corian vanity units (Decra Slabb design) with wall mounted mixer taps contrast well with the glossy grey cubicles.

Decra are chain of custody accredited and can provide a fully compliant PEFC specification for the **Burj** cubicle system.
