7th floor Holborn Gate offices - Decra **Burj** cubicles

Architects Scott Brownrigg specified the Decra Burj true full height cubicle system for the top floor of Holborn Gate office complex in London's Southampton Buildings street.

Formica gloss finish laminate in white has been used to clad the lightweight core board doors and pilasters (circa 38mm overall) with painted ash rebated hardwood lippings.

Gloss white laminate has also been used for the 19mm laminate faced particleboard partitions and Decra provided rear duct framework and particleboard panels which were then faced with white toughened glass.

DDA compliant stainless steel lock mechanism, sprung stainless steel hinge and buffered stainless steel coat hook are used as standard with the Decra Burj system.

Extruded aluminium acts as the floor and ceiling interface with a laminate infill strip in matching laminate.

Decra are chain of custody accredited and can provide a fully PEFC compliant version of the Burj system for BREEAM considerations.
