

Fact file

Reflex Gloss locker system with digital code access locks

Architects Barr Gazetas specified the Decra Reflex locker system for the **staff locker rooms at a new bowling centre in London's Docklands.**

Doors and Carcasses are all a robust 19mm thick with the former clad in high gloss black Laminate and providing a sharp contrast with the interior in white MFC. Assa digital access locks complete an attractive and practical installation for a modest outlay.

Reflex Gloss is eminently suitable for dry areas though fully waterproof equivalents are available. Reflex is very adaptable and can be installed in various height and width options with anything from single to five door configurations.

High gloss laminates offer a stylish alternative to traditional matt finishes with many providers offering a high wear finish for additional durability.
