

Duct panels with digital image laminate and wall panelling in wave effect

Simply stunning washrooms at Queen Mary University - designed by Decra and Cooch Assoc Surveyors.

The estates department at Queen Mary University wanted to update the tired cubicles in their Queens Building in the Mile End Road. Essex surveyors Cooch Associates asked Decra to come up with a design that combined some local interest with a contemporary cubicle solution. Decra took a series of high resolution photographs using the local Regents Canal as a backdrop, which were then encapsulated as Formica clad composite panels for the rear duct panels and Decra's elegant flush fascia range Stratum for the cubicles using durable 20mm solid grade laminate for the doors/ pilasters. The fascia panels are also in a glossy texture and are supplied in 3 different colour schemes for various washrooms within the building. Vanity units are constructed using Durat recyclable solid surface material and the wall panelling in an eye catching "wave" effect solid grade laminate. Contact Decra for details.
