

## **Breathtaking washrooms at the V&A !**

**These new washrooms at London's V&A museum were designed by architect Glowacka Rennie who specified the Decra Stratum flush fascia cubicle system. 20mm Glossy finish solid grade laminate is used for the doors and pilasters with a rebated edge to provide the linear appearance. This has been combined with glossy black 13mm solid grade laminate partitions to provide a beautifully elegant solution. An artist was commissioned to apply the stunning artwork on the faceted ceiling and window reveal with the end result being one of the best public washrooms we have ever seen. Stratum forms part of the Decra "Architectura" range which features many innovative washroom ranges including full height flush fascia designs Decra are based at..34 Forest Business Park Argall Avenue, London E10 7FB; T- 020 8520 4371 [www.toiletcubicles.org](http://www.toiletcubicles.org) Decra "committed to the science of panel engineering"**
