

Fact file

Aldgate House 33 Aldgate High Street

Workplace experts **Maris** specified the Decra **Symetria 2350** cubicle system for the fourth floor fit out of this prestigious office building near to Aldgate tube station in East London.

Slender aluminium pilasters are installed in a virtual full height configuration with a 150mm floor clearance (20mm and 100mm options are also available) and with the combination of quality DDA compliant stainless steel hardware, **Symetria 2350** represents a real cost saving alternative to conventional 44mm joinery for corporate office environments.

In this instance, the door and partition panels are constructed from durable 12mm solid grade laminate in plain grey, but we offer numerous wood grains and textures as well as a plethora of plain colours and alternative panel composites to suit different requirements.

Simple post formed laminate vanity top with walnut wood grain laminate under panels completes this impressive looking installation. Contact Decra for details.
