

Decra Symetria 2350 cubicle system with full height pilasters

Floor/ceiling interface

Pilaster/floor interface

Earham Primary School Symetria 2350 with digital imagery laminate

With the design requirements for school washrooms ever evolving, Decra are able to offer a version of our popular Symetria 2350 cubicle system with narrow aluminium pilasters taken to within a nominal gap of the ceiling and floor mounted in specially designed solid grade laminate interface. Partitions can be encased with aluminium extruded sections at the floor and ceiling to create a true full height version. Symetria 2350 is an established virtual full height system that has been on the market for several years and not just conceived to meet the current BSF thinking for a cost effective full height solution. To further reduce costs, we can use inexpensive melamine faced chipboard panel components in lieu of laminate bonded onto particleboard or we can offer the system with durable 13mm solid grade laminate.
