

Cliffs of Moher Visitor Centre as designed by R.O.R.S Architects of Douglas, Cork– a stunning engineering achievement

Decra Loo-ART washroom cubicles featuring digital graphics encapsulated with melamine for cubicle door fascias

**“The centre has gone through its first tourist season and we have received great reviews from the visitors. We have also received notifications that we have been chosen as winner of “best public interiors” from the International Federation of Interior Architects / Designers (IFI). We will be collecting the award in Korea next week. This is a major achievement for the Practice and for anyone who contributed to the project”.**

**John Leane Dip. Arch. Tech. (C.I.T.), RIAI (Arch. Tech.)  
For Reddy O’Riordan Staehli Architects. (October 2007)**

## Award winning solution from Decra washrooms-

LooART wc cubicle concept as used for the Cliffs of Moher visitor centre on Ireland’s west coast.

These digital images have been encapsulated with melamine to create 3 image zones with the largest image spanning 7 cubicles as a continuous mural. The panels are constructed from 13mm solid grade laminate with the image counterbalanced on the reverse with Decra graphite grey colour. Combined with aluminium pilasters that act as a natural break in the imagery (for DDA requirements) this breathtaking solution is a testament to Decra’s design capabilities. We can use your own imagery providing the file size is big enough to work with typical cubicle door sizes or we can source images such as vector images which can be manipulated to suit any size without any loss of image quality.
