Fact file

Colchester Magistrates Court solid grade laminate wall cladding

Decra worked closely with main contractor Galliford Try and sub contractor Houston Cox to provide this innovative corridor wall cladding using **Trespa** 13mm solid grade laminate in a gold yellow colour.

Panels are cut and mounted on a sub frame in a tiled configuration and Decra were able to effectively post-form the solid grade laminate panels around various curved profiles to stunning effect.

Although Decra are well known and well respected for our contemporary washroom cubicles, this project demonstrates the skilful work of our fabrication department.

Another example of the technique can be seen from the small image from a similar cladding project at the new control tower at Birmingham Airport.

Trespa solid grade laminate is extremely durable and as the laminate is self edged (solid grade laminate is just paper and phenolic resin) this is a good application for the material.
