

Symetria 2350...virtual full height washroom cubicles

Decra Symetria 2350 provides a more secluded space than standard cubicles by increasing fascia and partition heights to within 50mm of the ceiling.

This approach, when combined with pedestal foot options for 20mm and 100mm floor clearances, avoids the need for the more expensive floor and ceiling interfaces required in True Full Height cubicles.

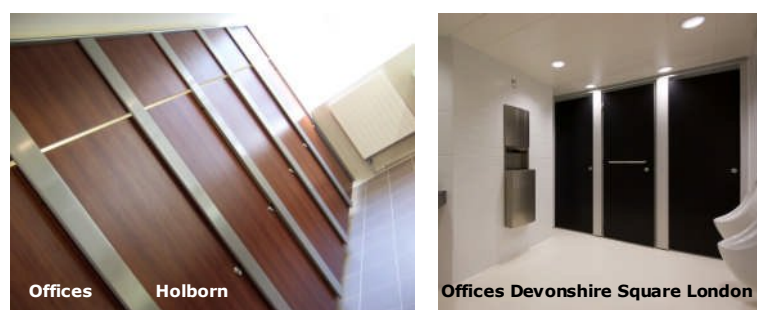

We call this "Virtual Full Height."

Symetria 2350 is already popular in office environments as a cost-efficient alternative to traditional joinery and is proving an increasingly attractive solution to the problem of improving washroom standards in schools, colleges and academies.

Quality DDA compliant s/steel locks and furniture are standard but SAA fittings are also available.

Contact Decra for more details and additional colour options.
